01 Professional Profile

As a Computer Engineer and Web Development specialist, I have participated in a variety of projects, working with different technologies and taking on client-facing responsibilities. My experience includes requirements analysis and gathering, as well as their subsequent implementation in the final product.

This experience has enabled me to develop a strong ability to adapt to different technologies, projects, and situations within professional environments. I also have the technical judgment to define and structure solutions that meet the client's actual needs.

I am accustomed to working as part of a team, leading and supporting my colleagues when necessary, with the goal of ensuring both client satisfaction and the quality of the final product. I place particular emphasis on the optimization, robustness, and quality of the systems I develop.

04 Work Experience

Company: IBlevel / Auctibid

February 2024 – July 2025

Position: Full-Stack Developer

In this role, I led the development of an online auction platform, working directly with the client to analyze and gather system requirements, optimize processes, refactor legacy code, and implement new features requested by the client as development progressed, among other responsibilities, with the ultimate goal of bringing the product to market.

One of the most significant challenges I undertook was the complete migration of the project from Laravel 4.2 to the latest version, Laravel 11.

Technologies Used

Git/GitHub

Bootstrap

Node.js

Laragon

SSH Certificates

WebSockets

Company: AiFile

2019 - 2020

Position: Front-End Developer

I developed various projects using FileMaker, creating business management systems tailored to each client's specific needs.

I maintained direct and regular communication with clients through remote meetings, monitoring project progress and ensuring that the solutions developed effectively addressed their requirements.

I also actively contributed to the improvement and evolution of the systems by proposing functional alternatives, enhancements, and new ways to automate processes, with the aim of optimizing the management and efficiency of clients' businesses.

Technologies Used
